

CALCULATOR WITH GUI [GitHub](#)

Project Type: A Python-based graphical calculator application for performing basic arithmetic operations.

Programming Language: Python

Internship: Python Developer Internship

Organization: Auspify Technologies

1. Description

The Calculator with GUI is a Python application developed using Tkinter. It provides a simple graphical interface where users can perform basic calculations such as addition, subtraction, multiplication, and division.

The application also includes a Clear button and handles errors such as division by zero and invalid input.

2. Objective

The main objectives of this project are:

- To create a calculator with a graphical interface.
- To perform basic arithmetic operations.
- To handle invalid inputs and errors.
- To display calculation results dynamically.
- To learn Python GUI development using Tkinter.

3. Features

- Addition

- Subtraction
 - Multiplication
 - Division
 - Number and decimal input
 - Clear button
 - Error handling
 - Simple and user-friendly interface
-

4. Technologies Used

Technology	Purpose
Python	Application development
Tkinter	Graphical User Interface
Functions	Calculator operations
Event Handling	Button actions

5. How It Works

1. The calculator window opens.
2. The user enters numbers and operators using the buttons.
3. The entered expression appears in the display.
4. The user presses = to calculate the result.
5. The result is displayed on the screen.
6. Clear removes the current input.

Error Handling

- Division by zero → "Cannot divide by zero"
- Invalid expression → "Invalid input"

6. How to Run

Step 1: Install Python on your computer.

Step 2: Save the code as:

calculator.py

Step 3: Open the project folder in Command Prompt / Terminal -> New Terminal

Step 4: Run:

python calculator.py

Step 5: The calculator window will open.

Step 6: Enter numbers and operators using the buttons.

Step 7: Press = to view the result.

Step 8: Press **Clear** to perform a new calculation.

Result: The calculator successfully performs basic arithmetic operations through a simple graphical interface.
